Professional summary

Having a total 13+ years of experience in Software Development Experience with the python and AWS cloud.
Good Knowledge on Flask in backend development with Rest API.
Good knowledge in tools like Gitlab, Git, Kibana.
Experience of working in a services-oriented architecture and web-based development.
Knowledge on PL/SQL, SQL Developer.
Active participation in project Knowledge Transition activities.
Having good Debugging Skills
Having good Experience with GITLAB which is continuous integration and deployment system
Excellent Communication skills and willing to learn new technologies.

Technical Skills:

Operating Systems:	Windows, Ubuntu.
FrameWorks:	Flask, Pandas, BeautifulSoup
Languages:	Python
Databases:	MySQL, DynamoDB
IDE Tools :	VSCode, Python IDLE, Jupyter
Version Control Systems:	Git, GITLAB
Cloud	AWS

Development Models:

✓ Agile methodology.

Educational Qualification:

✓ B. Tech in Electrical and Electronics- 2013.

Certifications:

✓ AWS Certified Solutions Architect
✓ Microsoft Certified: Azure Developer Associate

WORK EXPERIENCE:

✓ Working as a Project manager at Cognizant technology services Jan,2025 to till date.

Professional Experience:

Project 1	Field Copilot - Merck
Role	Project Manager
Involvement	Designed and architected a Field Copilot (FCP) that consolidated customer interaction and business data from multiple sources, including chat communications, call records, company discounts, sales transactions, and purchase history. The platform provided a unified view of Healthcare Professionals (HCPs) and Healthcare Organizations (HCOs)/Accounts, enabling data-driven decision-making and identifying new sales opportunities for medical representatives. ● Defined product strategy, business requirements, and solution roadmap based on stakeholder and customer needs. ● Selected the technology stack and designed the AWS cloud infrastructure for scalability and reliability. ● Created high-level and low-level architecture designs to support project implementation. ● Developed backend services and automation scripts aligned with functional and business requirements. ● Designed data integration workflows to aggregate and normalize data from multiple enterprise systems. ● Authored and maintained technical documentation, architecture artifacts, and Confluence knowledge repositories. ● Collaborated with cross-functional teams to ensure successful delivery and alignment with business objectives. ● Performed testing, troubleshooting, and root-cause analysis to ensure application stability and performance. ● Prepared debugging reports and implemented continuous improvements based on testing outcomes.
Technology	Python, FastAPI, AWS-RDS, Github pipeline.

✓ Worked as a Senior Engineer at Tata Consultancy Services Sep,2022 to 2nd January 2025.

Professional Experience:

Project 1	Schedule Service for media metadata management - Nielsen Project
Role	Senior Developer
Involvement	Developed and architected a project to load media metadata from EPG (Electronic Program Guide) to RDS (Relational Database Service). The project aimed to streamline the process of managing and accessing media metadata, improving efficiency and accuracy. Responsibilities include: ● Developed the strategy, business plan, and product requirements based on customer needs. ● Decided on the tech stack and utilization of AWS resources. ● Created a high-level architecture diagram. ● Wrote scripts according to functional requirements. ● Created a low-level architecture diagram. ● Developed a Confluence page related to the project. ● Conducted testing and prepared debugging reports.
Technology	Python, AWS (EC2, RDS, SNS, SQS, AWS-Glue, VPC, Lambda, S3, CloudWatch) and MySQL.

Project 2	API Project for Asset reviewer tool - Nielsen Project
Role	Lead/Developer
Involvement	Developed an API project to facilitate asset management and review processes for the Asset Reviewer Tool. Asset Reviewer Tool is a GUI platform where users can select, modify, change the commercial and content part as per programs. Responsibilities include: ● Interacted with the client to understand and finalize the requirements. ● Initial project set up. ● Analyzing the flows among the applications. ● Developed utility components. ● Wrote SQL queries, Triggers and stored procedures.

	• Designed multiple API endpoints to perform CRUD operations on asset data. • Incorporated comprehensive error handling to manage and log various exceptions and errors. • Optimized the API for performance, ensuring quick response times and efficient processing of requests. • Reporting progress to the project manager. • High level project planning and scheduling. • Fixed defects in code and participated in code reviews. • Acted as a point of contact for clients on technical matters and provided support to them. • Maintaining all the required documents updated Up to date. Achievements: Received appreciation from client for record time implementation.
Technology	Utilized Flask-a lightweight web framework for Python, AWS, MySQL, ElasticSearch, Glue, CI pipeline

Project 3	API Project for Cloud Space portal - Telefonica Project
Role	Project Lead/Developer
Involvement	Developed an API project to provide user interface with backend to create resources inside AWS/Azure/Google clouds from a single platform . Responsibilities include: • Interacted with the client to understand and finalize the requirements. • Initial project set up. • High level project planning and scheduling. • Prepared high level architecture diagram • Analyzing the flows among the applications. • Involved in deployment activities. • Created backend code for data retrieval as well for core logics. • Wrote SQL queries, Triggers and stored procedures. • Developed utility components. • Reporting progress to the project manager. • Fixed defects in code and participated in code reviews. • Acted as a point of contact for clients on technical matters and provided support to them. • Running the daily team meetings ensures they are timely, focused and brief.

	● Maintaining all the required documents updated Up to date.
Technology	Utilized Flask-a lightweight web framework for Python, AWS, MySQL, Terraform, Jinja template, Gitlab

✓ Worked as an Assistant Manager at Swajal Water Pvt Ltd (Product based company) Oct,2021 to Aug,2022.

Professional Experience:

Project 1	Water Dispensing process with display module
Role	Lead/Developer
Involvement	Developed a system that controls the water dispensing process based on touch display (Mainly for Airport Lounges across India). Responsibilities include: ● Developed the strategy, business plan, and product requirements based on customer needs. ● Decided on the tech stack and utilization of AWS resources. ● Created a high-level architecture diagram. ● Wrote scripts according to functional requirements. ● Created a low-level architecture diagram. ● Initial project set up. ● Analyzing the flows among the applications. ● Involved in deployment activities. ● Developed utility components. ● Reporting progress to the client. ● High level project planning and scheduling. ● Developed a Confluence page related to the project. ● Conducted testing and prepared debugging reports.
Technology	Python, AWS (EC2, RDS, SNS, SQS, VPC, Lambda, S3, CloudWatch) and MySQL.

✓ Worked as a Senior Engineer at Vs Saurya Enertech Pvt Ltd Feb,2017 to Sep,2021.

Professional Experience:

Project 1	IRCTC

Role	Project Lead/Developer
Involvement	This was the IRCTC project for PAN India to design and deploy the vending machine across all the platforms. Responsibilities include: ● Interacted with the client to understand and finalize the requirements. ● Initial project set up. ● High level project planning and scheduling. ● Prepared high level architecture diagram ● Analysing the flows among the applications. ● Involved in deployment activities. ● Wrote SQL queries, Triggers and stored procedures. ● Developed utility components. ● Reporting progress to the project manager. ● Fixed defects in code and participated in code reviews. ● Acted as a point of contact for clients on technical matters and provided support to them. ● Maintaining all the required documents updated Up to date.
Technology	Python, AWS, MySQL, Pandas

Project 2	Army-Cantonment Board
Role	Project Lead/Developer
Involvement	This was the Cantonment board project to design and deploy the vending machine and shared data to their own platform. Responsibilities include: ● Interacted with the client to understand and finalize the requirements. ● Initial project set up. ● High level project planning and scheduling. ● Prepared high level architecture diagram ● Analyzing the flows among the applications. ● Involved in deployment activities. ● Wrote SQL queries, Triggers and stored procedures.

	● Developed utility components. ● Reporting progress to the project manager. ● Fixed defects in code and participated in code reviews. ● Acted as a point of contact for clients on technical matters and provided support to them. ● Running the daily team meetings ensuring they are timely, focused and brief. ● Maintaining all the required documents updated Up to date.
Technology	Python, AWS, MySQL

Project 3	RENEW Power
Role	Developer
Involvement	This was the Renew power electricity board project to design and deploy the vending machine and shared data to their own platform. Responsibilities include: ● Interacted with the client to understand and finalize the requirements. ● Initial project set up. ● High level project planning and scheduling. ● Prepared high level architecture diagram ● Analyzing the flows among the applications. ● Involved in deployment activities. ● Wrote SQL queries, Triggers and stored procedures. ● Developed utility components. ● Reporting progress to the project manager. ● Fixed defects in code and participated in code reviews.
Technology	Python, Flask, AWS, MySQL

✓ Worked as an Engineer at Holmium Technology Pvt Ltd Aug,2013 to Jan,2017.

Professional Experience:

Project	Datalogger

Role	Engineer
Involvement	This product was used in data logging from solar inverters and sending them to their own server. There was one GUI which can provide to customer to check their data on visual form. Responsibilities include: ● Created script to log data from hardware to machine ● Created script to send data to AWS database. ● Involved in installation of the machine ● Client interaction to provide demo ● High level project planning and scheduling. ● Prepared high level architecture diagram ● Analyzing the flows among the applications. ● Involved in deployment activities. ● Wrote SQL queries, Triggers and stored procedures. ● Developed utility components. ● Maintaining all the required documents updated Up to date.
Technology	Python, AWS, MySQL, AWS-Glue, Pandas, Raspberry-pi
